Layout

src/config/db.js; controllers/authController.js, faqController.js, aiController.js; middleware/authMiddleware.js, validationMiddleware.js, errorMiddleware.js; models/User.js and FAQ.js; routes/authRoutes.js, faqRoutes.js, aiRoutes.js; services/geminiService.js; utils/helpers.js; app.js; server.js.

Separation

Route files attach middleware and controller handlers. Controllers coordinate model/service operations. Models declare MongoDB data rules. Gemini service wraps provider calls.

Reusable controls

Validation middleware handles registration, login, FAQ, and AI input rules; protect middleware gates private routes; centralized errors shape failure responses.

Review opportunities

Add automated ownership and schema tests, cap/escape regex search input, consider pagination, align Gemini model/version choices, and avoid exposing internal provider error details in production.
