Problem

People looking for answers may need one place to browse FAQs; content owners need a controlled way to create and update entries; users may also need help drafting answers and FAQ pairs.

Problem statements

- As a visitor, I need to browse and search FAQs without signing in.
- As a registered user, I need to create FAQs and manage only FAQs I own.
- As a user, I need protected account access and a profile endpoint.
- As an authenticated user, I need an AI answer for a question and a generated FAQ pair for a topic.

Scope boundary

Implemented capabilities are exposed as REST endpoints. No frontend, analytics dashboard, editorial approval workflow, or public deployment is shown.

Success criteria

Endpoint code and included test assets describe health, auth, FAQ CRUD/search, and AI flows. Actual execution outcomes should be recorded from a real test run.
