Source archive contents

The uploaded ZIP contains `src/`, `package.json`, `package-lock.json`, `README.md`, `test_api.js`, and `AI_FAQ_Assistant_API.postman_collection.json`.

Setup

README lists Node.js 18+ or 20+, MongoDB, and Gemini API key. Install dependencies with `npm install`. Configure `PORT`, `MONGO_URI`, `JWT_SECRET`, `GEMINI_API_KEY`.

Run

Use `npm run dev` (Node watch mode) or `npm start`. Server connects to MongoDB before accepting requests.

API tests

Run the included `test_api.js` only in a controlled environment with an isolated test database; it creates and deletes test records. Import the Postman collection for manual requests.

Secrets

Do not distribute `.env` values. This phase package includes the collection but excludes the original `.env`.
