Overview

Build a REST backend that separates accounts, FAQ content, and AI generation. Public users can read/search; authenticated contributors manage their own entries and request AI assistance.

Modules

- config/db.js establishes MongoDB connection.
- app.js loads environment, JSON/urlencoded parsing, CORS, route groups, health, and errors.
- auth routes/controllers handle register, login, profile.
- FAQ routes/controllers handle public reads/search and protected CRUD.
- AI routes/controllers validate and call Gemini service.
- Models define User and FAQ persistence.
- Middleware handles JWT, validation, and errors.

Ownership rule

New FAQ records are assigned to req.user. Only the creator may update or remove them.

Out of scope

Web UI, content moderation queue, version history, analytics, and deployment are not in submitted code.
