

AI FAQ ASSISTANT API

Scalability & Future Plan

Growth and reliability opportunities

TEAM ID	SWTID-2026-8832
TEAM SIZE	5
TEAM	Gokulakrishnan K (Leader); Arunkumar M; Dhina S; Siva A; Gowtham M
DATE	30 September 2026

Current foundation

Modular Express routes/controllers/models, FAQ creator references, validation middleware, and separate Gemini service.

Near-term

- Add unit/integration coverage for owner/non-owner and malformed-input cases.
- Escape or constrain regex search and paginate FAQ results.
- Add rate limits and request-size constraints, especially for AI calls.
- Configure provider timeouts, quotas, retries, and structured operational logs.
- Add indexes based on observed search/query workload.

Scale options

Managed MongoDB with backups, stateless API instances, external secrets management, caching for public FAQ reads, and queueing for slower AI generation where justified.

Trust and safety

Review AI-generated answers before publishing; disclose generated content; avoid treating the API as a professional advice source.

Boundary

These are future recommendations; deployment, caching, queues, monitoring, and moderation are not implemented in the supplied archive.
